It is not a question of whether the water supply will ever be interrupted, but rather when it will occur and for how long it will last. In order to maintain daily operations and patient care services, health care facilities need to develop an Emergency Water Supply Plan (EWSP) to prepare for, respond to and recover from a total or partial interruption of the facility's normal water supply. The EWSP should be a chapter in the overall facility emergency response plan and should be exercised on a regular basis and revised appropriately.

- CDC & AWWA EWS GUIDELINES

Water System Services

Our water system services are based on a thorough assessment of your water quality and system performance along the entire line. Our service addresses all types of water systems to prevent the spread of waterborne pathogens.

Water Treatment Products

Every Garrett-Callahan program is a custom solution specifically designed, monitored and maintained for your facilities. We offer a complete range of products to meet your needs.

EMERGENCY PREPAREDNESS

June 2017 Mandate

Centers of Medicare and Medicaid Services
(CMS) SC 17-29

Emergency Preparedness SC 17-29 Mandate

PREPAREDNESS IS ESSENTIAL TO SURVIVAL

The New Standard issued by the CMS Mandate SC 17-29 for emergency preparedness dictates that care providers are prepared, rehearsed and certified. Here is how the team at Garratt-Callahan supports you in an area of the highest concern: **Water Safety.**

Our Mission is to provide a reliable water delivery system that can continue to perform under emergency “shelter-in-place” conditions. Having a system in place that constantly monitors water quality, pre-treats source and storage water with full-line filtration will provide safer water during an emergency.

Our Program will help you observe the directions of the mandate for emergency preparedness and will demonstrate compliance to the water supply portion of your facility’s emergency plan.

Our Emergency Cart Filtration System is able to be configured to meet each site's individual and unique needs. Upon completing the site assessment, we will adequately size the filter system based upon demand for flow and pressure.

AREAS OF COMPLIANCE SUPPORT:

- Assessment and documentation related to CDC and AWWA emergency water preparedness guidelines policies and procedures
- Assist facility’s EWS team in performing the water use audit
- Main incoming water supply treatment, storage and purification
- Full-line water quality and point of entry filtration to eliminate most waterborne pathogens
- Secondary disinfection during recovery

GARRATT-CALLAHAN ROLES & ASSURANCES

Monitor water usage volumes and treatment cycles, chemical levels, and inventory of supplies on-site.

We are ISO 9001:2015 compliant and our G-C in-house laboratory is California ELAP certified. Our team of scientists performs water sample testing and develops leading-edge water treatment solutions. All G-C products ship from any of our five regional locations in the US.

Maintain filtration replacement for optimum safe water delivery and abatement of waterborne pathogens.

Garratt-Callahan is an approved vendor for facility compliance with all current CMS Water Safety Regulations and provides representation during compliance exercises, as well as on-site CMS surveys.

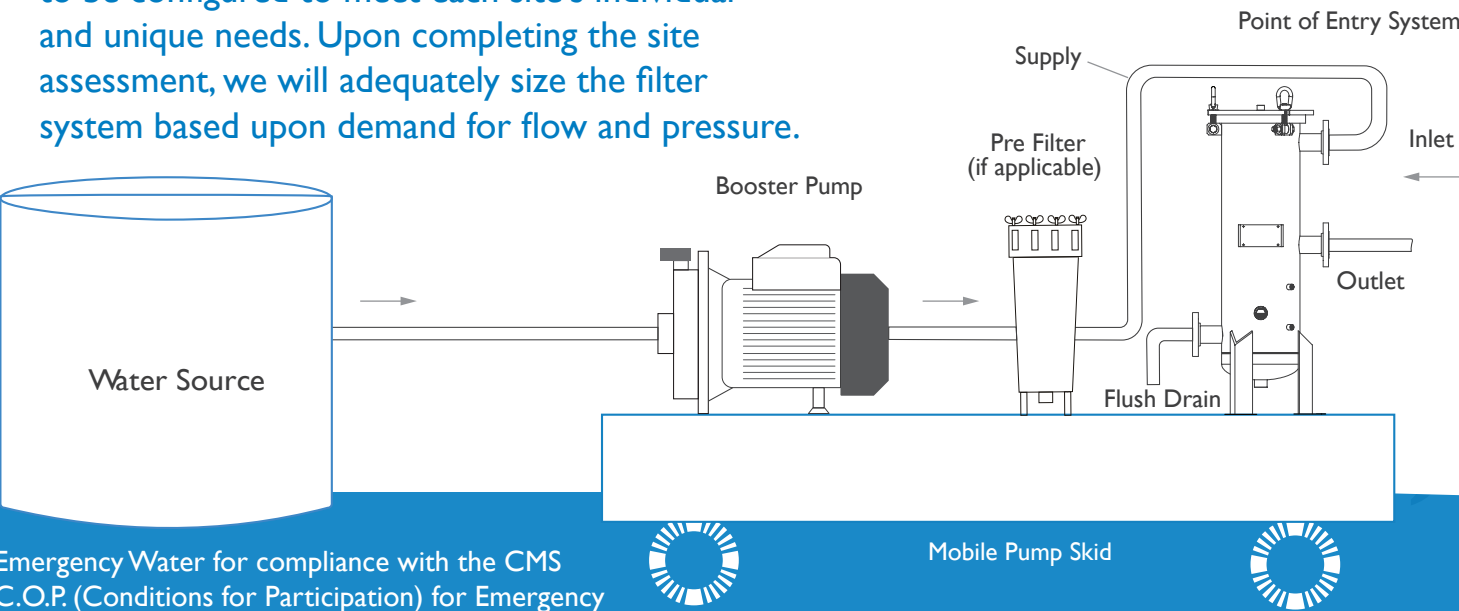

POINT OF ENTRY SYSTEM

Our Point of Entry (POE) filter is the ultimate barrier for your water applications, including potable water, cooling systems, closed loops, and other applications. The 304SS housing six 20” clean in place 0.2 micron filters to allow for flow rates up to 30 GPM.

FEATURES:

- Designed for high-volume source water applications
- Reduces TSS and traps particulates as small as 0.2 microns
- Expected life up to 300,000 gallons, depending on water quality
- Clean-in-place design removes need for complicated piping

Emergency Water for compliance with the CMS C.O.P. (Conditions for Participation) for Emergency Management COP-482.15 Emergency Preparedness.
