

Effective  
Legionella  
prevention  
& treatment.

Designed with  
you in mind.

- *Easy systems integration*
- *Simple installation and start-up*
- *Effective, long-lasting disinfection*

Chlorine Dioxide Generators

Water Treatment Expertise Since 1904

# Chlorine Dioxide Generators

## Grundfos Technology Inside

Stubborn biofilm in your water systems provides a protective breeding ground for Legionella and other water-borne pathogens. To disinfect and protect your system, you'll need to treat your water accordingly. Chlorine dioxide ( $\text{ClO}_2$ ) generators have been proven as one of the most effective methods to treat and disinfect your system.

### Long Lasting Effects

Chlorine dioxide continues to disinfect without re-dosing due to strong residual levels and dwell time.

### Minimal Space Required

Generators are ideal for installation in confined spaces as operation and maintenance are performed from the front.

### Lower Operating Cost

Our  $\text{ClO}_2$  generators work with less chemical consumption and maintenance when compared to other systems on the market. The operating costs are also minimal when compared to thermal disinfection programs.

### Easy Installation and Start-up

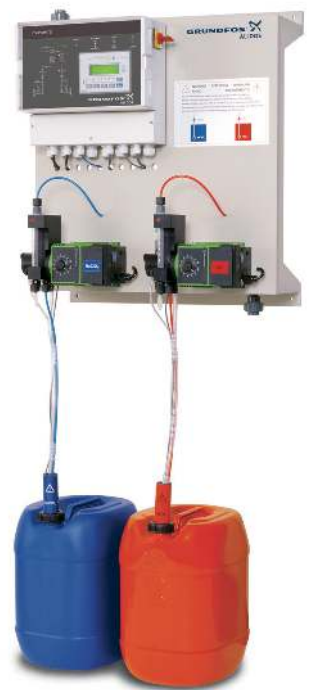

Assembly and start-up are simple. The system can be connected and taken into operation on-stream, eliminating the cost and trouble associated with downtime.

### Connectivity and Integration

$\text{ClO}_2$  generators can be easily connected to your existing building management systems and controllers to monitor and record treatment.

*Oxiperm 164 C prepares  $\text{ClO}_2$  from concentrated solutions.*

*Oxiperm 164 D prepares  $\text{ClO}_2$  from diluted solutions.*
